enercon

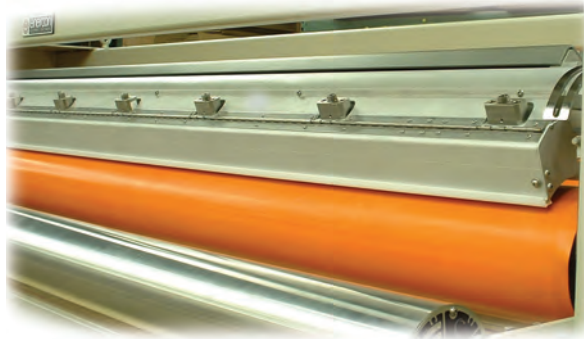

Application specific solutions Web surface Treating

Bare Roll Corona with Ceramic Electrodes

Treats conductive & non-conductive webs
Ideal for basic corona applications
No ground roll covering to fail or replace

Covered Roll Corona with Metal Electrodes

Treats non-conductive webs
Ideal for segmented treatment
Used primarily for extrusion film applications

High Definition Corona

Treats conductive & non-conductive webs
Superior treatment levels and adhesion results
Best web handling capabilities

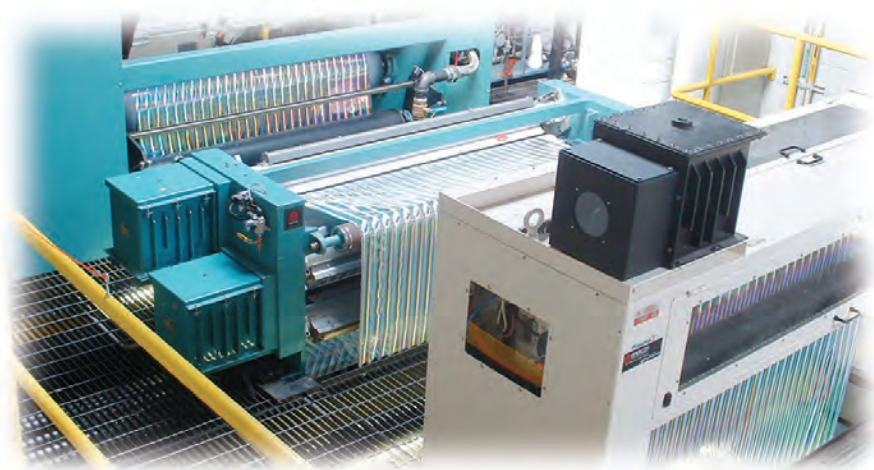

Customized application specific solutions

Narrow, wide and Ultra-wide systems
Integrated with leading OEM press designs
Custom engineering support

Application specific solutions Treating of Objects

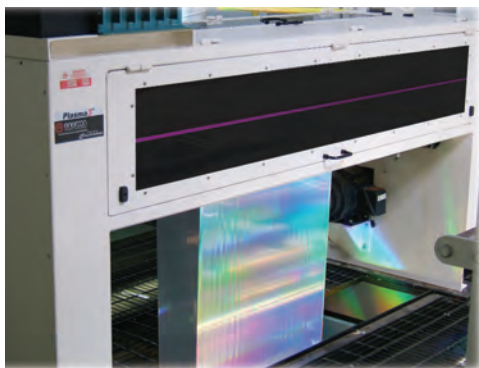

Corona? Flame? Plasma?

Surface Treating Laboratories
Free laboratory application evaluations

Plasma for today's surface challenges

Enercon's leading atmospheric plasma treatment technology cleans, etches and functionalizes surfaces that would be otherwise unresponsive.

Systems designed for films, metals, nonwovens, glass and sheets.

Power generation for all applications

Universal systems from 1-100kW

Global Perspective. Local Support.
